All the files needed for this unit are in this folder. The first document you should look at is

Unit 5 Teaching Guide with Answers.docx

This unit covers both the network hardware and internet components of the specification. Students first consider the network hardware required along with both MAC and IP addresses. They then move on to considering how the internet and world wide web work along with web browsing and the technologies behind it such as URLs, HTTP/S and HTML. The role of cookies, DNS and web servers are also covered in lesson 5. Lessons 6 and 7 look thoroughly at cyber security, including how attacks are carried out and the preventative solutions that are used to combat them. The final lesson discusses digital currencies and blockchain technologies. A final assessment is given for students to demonstrate their knowledge and understanding of the topics covered.

You may wish to copy the files from the unit onto a secure shared network drive or VLE where students can access the presentations, worksheets, homeworks and links. Remember to remove any documents you would prefer them not to access such as the assessment and answer sheets.

You may also wish to upload the files for secure home access. This could be via an MLE such as Fronter, Frog, SharePoint or Moodle.

If you have any difficulty opening any of the files, which were all created in Office 365, or experience any other problems, please email support@pgonline.co.uk.

This is the fifth in a series of 10 units for Cambridge IGCSE 0478/0984 and O Level 2210 Computer Science. We hope you will find it useful.
