

Student Checklists & Downloads

These checklists are your essential companions for the IA. Use them at each stage of your project, from proposal to final submission, to ensure you haven't missed any key requirements. They break down the official IB criteria into simple, actionable steps, helping you stay organised and on track for a successful computational solution.

Student Checklist

Use these checklists to stay organised and ensure you've met all the requirements for each stage of the IA. To get a more detailed checklist check out the downloads section below.

Checklist 1: Project Proposal (Criterion A)

Use this before you start coding, when you are finalising your idea.

Problem Scenario

- Have I identified a specific user or client?
- Have I clearly described the *problem* they face, not just the *solution* I want to build?
- Have I explained *why* the current system (if any) is inadequate?

Computational Context

- Have I clearly stated *what* kind of solution I will build (e.g., OOP app, web app, database)?
- Have I justified *why* I chose this platform/language for this specific problem?

Success Criteria

- Have I written at least 8-10 success criteria?
- Are all my criteria **specific** and **measurable** (e.g., "The user can sort by name," not "It will be user-friendly")?
- Is every criterion **testable** with a clear "pass/fail" outcome?

Checklist 2: Design & Plan (Criterion B & C)

Use this after your proposal is approved, as your technical blueprint.

Criterion B: Planning

- Have I **decomposed** my main problem into smaller, manageable sub-problems?
- Have I created a **timeline** (like a GANTT chart) that covers all 5 stages (Planning, Designing, Developing, Testing, Evaluating)?
- Is my plan a *plan for the future*, not a *journal of the past*?

Criterion C: System Overview

- Have I created a **system model diagram** (e.g., UML Class Diagram for OOP, ERD for a database, Flowchart for logic)?
- Have I included **annotated sketches** of my proposed User Interface (UI)?
- Have I written the **algorithms** for my main components (using pseudocode or flowcharts)?
- Have I created a **test plan** table?
- Does my test plan include tests for **all my Success Criteria** (from A)?
- Does my test plan include **valid**, **invalid**, and **extreme/boundary** data?

Checklist 3: Final Documentation (D & E)

Use this before you submit your final 2,000-word PDF.

Overall

- Is my entire document under the **2,000-word limit**?
- Have I stated the final word count on the front page?
- Is the document organised into five sections (A, B, C, D, E)?

Criterion D: Development

- Have I used **code excerpts** (not huge blocks) to show my techniques?
- Have I **justified why** I chose each technique (e.g., "I used a binary search for efficiency...")?
- Have I provided **test evidence** (e.g., screenshots or tables with "Observed Results")?
- Does my test evidence show what happens with **invalid data**?
- Have I acknowledged any **AI (LLM) help** I received, both in my code and in the documentation?

Criterion E: Evaluation

- Have I evaluated **every single Success Criterion** from Criterion A (e.g., in a table)?
- Have I used **evidence from my testing** (in D) to support my evaluation?
- Have I suggested **specific** and **justified** improvements (e.g., "Refactor the algorithm to be $O(n \log n)$ " not "Make it better")?

Appendix

- Have I included my **FULL, complete, and commented source code** in the appendix PDF?

Checklist 4: The Video

Use this when you are ready to record your 5-minute video.

- Is my video **under 5 minutes**?
- Is it in a standard file format (like **MP4**)?
- Does my video show **all the main features** of my product working?
- Does my video show me testing **invalid** or **extreme data** to prove my product is robust?
- Have I avoided showing my code, my face, or long, boring data entry?
- Is my commentary (if any) simple and to the point?

Document Downloads

Criterion	Document	Description
All	Project document template	This simple Google Doc has all the headings and some simple advice you need to writeup your Internal Assessment. It is also a good starting point for your check-in sessions with the teacher.
All	Checklist	This checklist allows you to track your progress through the project.
Criterion B	Example Gantt chart timeline	Google Sheet timelines are a simple way of creating your Gantt chart. Here is one filled with sample data for a library management system. Find out more on how to set up timelines in Google Sheets here. Please note this is a generic example. You need to demonstrate clearly that your timeline is specific to your project.
