All the files needed for this unit are in this folder. The first document you should look at is

Unit 2 Teaching Guide with Answers.docx

This unit covers the key aspects of data transmission. It starts by considering packets of data and their structure. It then extends to the different methods of data transmission, including serial, parallel, simplex, half and full-duplex. The universal serial bus is considered along with the benefits and drawbacks of the interface. Lesson 3 allows students to understand methods of error detection including parity checks, echo checks and checksums. ISBNs are given as examples of check digit use. The final lesson deals with both asymmetric and symmetric encryption. Students are able to demonstrate their understanding in the unit's final assessment test.

You may wish to copy the files from the unit onto a secure shared network drive or VLE where students can access the presentations, worksheets, homeworks and links.

Remember to remove any documents you would prefer them not to access such as the assessment and answer sheets.

You may also wish to upload the files for secure home access. This could be via an MLE such as Fronter, Frog, SharePoint or Moodle.

If you have any difficulty opening any of the files, which were all created in Office 365, or experience any other problems, please email support@pgonline.co.uk.

This is the second in a series of 10 units for Cambridge IGCSE 0478/0984 and O Level 2210 Computer Science. We hope you will find it useful.

We would greatly appreciate your feedback once you have had a chance to use the material. Please send an email to support@pgonline.co.uk.
