All the files needed for this unit are in this folder. The first document you should look at is

Unit 8 Teaching Guide with Answers.docx

The first lesson in this unit covers the development life cycle, giving students an appreciation of some of the techniques and methods required when developing programs. Lessons 2 and 3 introduce student to algorithms using both flowcharts and pseudocode. Lesson 4 demonstrates standard algorithms to students such as those required for linear searches, bubble sorts, counting and averages. Lesson 5 shows students common validation and verifications checks. Testing and trace tables are considered carefully along with the selection of appropriate types of test data including abnormal, extreme and boundary data items. Finally, students are shown how to refine algorithms. The final assessment test gives students the opportunity to demonstrate their understanding of the topic.

You may wish to copy the files from the unit onto a secure shared network drive or VLE where students can access the presentations, worksheets, homeworks and links. Remember to remove any documents you would prefer them not to access such as the assessment and answer sheets.

You may also wish to upload the files for secure home access. This could be via an MLE such as Fronter, Frog, SharePoint or Moodle.

If you have any difficulty opening any of the files, which were all created in Office 365, or experience any other problems, please email support@pgonline.co.uk.

This is the eighth in a series of 10 units for Cambridge IGCSE 0478/0984 and O Level 2210 Computer Science. We hope you will find it useful.
