

Readme

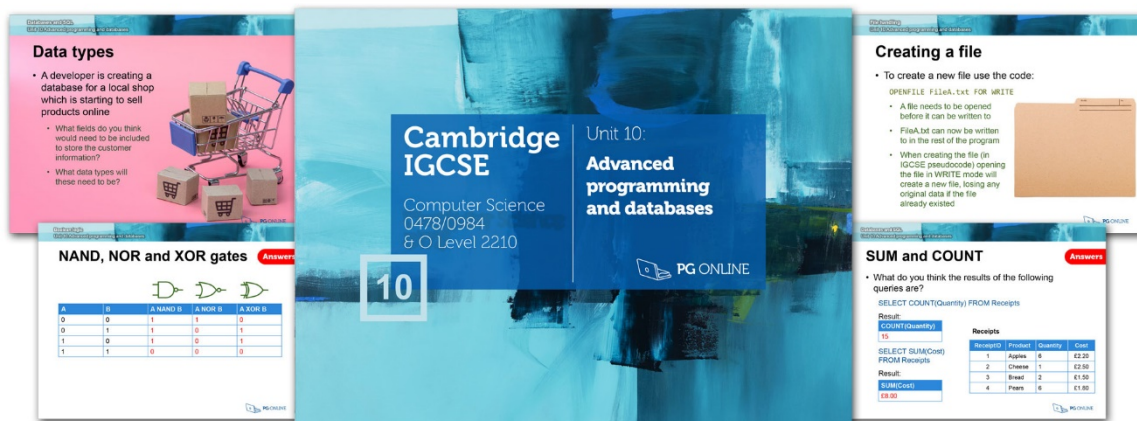

All the files needed for this unit are in this folder. The first document you should look at is

Unit 10 Teaching Guide with Answers.docx

This second programming unit covers a selection of more advanced topics. The first lesson begins by looking at procedures and functions. Students are then introduced to file handling techniques. Boolean logic is considered in lesson 3. This lesson covers all the common gates and the more advanced NAND, NOR and XOR gates. Lesson 4 covers maintainable programs. The last lesson concludes the programming unit with a look at both databases and SQL. SELECT queries are covered in depth, including the use of ORDER BY, SUM and COUNT. Many practical examples and tasks are given for students to solve throughout the unit. The final assessment gives students the opportunity to demonstrate their understanding of programming concepts in a written form.

You may wish to copy the files from the unit onto a secure shared network drive or VLE where students can access the presentations, worksheets, homeworks and links. Remember to remove any documents you would prefer them not to access such as the assessment and answer sheets.

You may also wish to upload the files for secure home access. This could be via an MLE such as Fronter, Frog, SharePoint or Moodle.

If you have any difficulty opening any of the files, which were all created in Office 365, or experience any other problems, please email support@pgonline.co.uk.

This is the tenth in a series of 10 units for Cambridge IGCSE 0478/0984 and O Level 2210 Computer Science. We hope you will find it useful.
