All the files needed for this unit are in this folder. The first document you should look at is

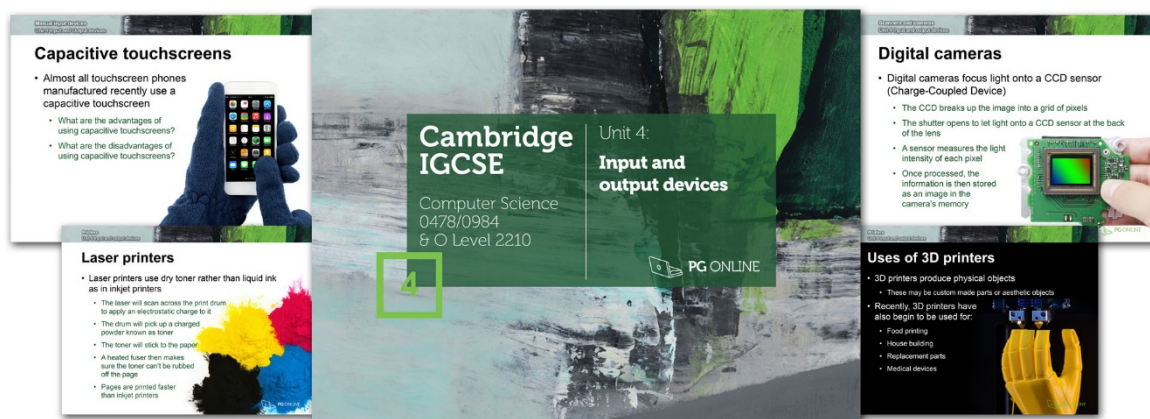

Unit 4 Teaching Guide with Answers.docx

Unit 4 covers the large number of input and output devices that are required by the specification. All key input and output devices are introduced, with a special focus on the technologies that students may have less understanding of such as 2D and 3D scanners, actuators and various sensors such as accelerometer, infra-red and proximity sensors. Students will also be shown how to identify the type of data captured by each sensor. Finally, an end of unit final assessment test will cover all aspects of the unit.

At the end of the unit an assessment test is given comprising questions similar to those found on the IGCSE exam paper.

You may wish to copy the files from the unit onto a secure shared network drive or VLE where students can access the presentations, worksheets, homeworks and links. Remember to remove any documents you would prefer them not to access such as the assessment and answer sheets.

You may also wish to upload the files for secure home access. This could be via an MLE such as Fronter, Frog, SharePoint or Moodle.

If you have any difficulty opening any of the files, which were all created in Office 365, or experience any other problems, please email support@pgonline.co.uk.

This is the fourth in a series of 10 units for Cambridge IGCSE 0478/0984 and O Level 2210 Computer Science. We hope you will find it useful.

We would greatly appreciate your feedback once you have had a chance to use the material. Please send an email to support@pgonline.co.uk.
