All the files needed for this unit are in this folder. The first document you should look at is

Unit 6 Teaching Guide with Answers.docx

This unit covers types of software and interrupts. System software, application software and operating systems are considered in the first two lessons. The functions of operating systems are carefully studied, including file and memory management, multitasking and system security. Lesson 3 considers the role and operation of interrupts. Lesson 4 considers both high-level and low-level languages along with the advantages and disadvantages of each. Compilers and interpreters are also covered in this lesson. The final lesson looks at IDEs along with the common functions that they provide such as error diagnostics, prettyprint and auto-completion. The final assessment gives an opportunity for students to attempt exam style questions related to the topic.

You may wish to copy the files from the unit onto a secure shared network drive or VLE where students can access the presentations, worksheets, homeworks and links. Remember to remove any documents you would prefer them not to access such as the assessment and answer sheets.

You may also wish to upload the files for secure home access. This could be via an MLE such as Fronter, Frog, SharePoint or Moodle.

If you have any difficulty opening any of the files, which were all created in Office 365, or experience any other problems, please email support@pgonline.co.uk.

This is the sixth in a series of 10 units for Cambridge IGCSE 0478/0984 and O Level 2210 Computer Science. We hope you will find it useful.
