All the files needed for this unit are in this folder. The first document you should look at is

Unit 9 Teaching Guide with Answers.docx

This first programming unit assumes that students have no knowledge, however, it progresses quickly on the assumption that many students will already have some experience of programming. Key programming concepts such as data types, variables and constants are dealt with in the first lesson. Selections using IF and CASE statements are considered in the second lesson. Lesson 3 covers iteration, including count-controlled, pre-condition and post-condition loops. Arrays are considered in lesson 4 with the final lesson 5 covering both string manipulation and library routines. Throughout the unit, practical opportunities are given for students to program. The final unit assesses students with written questions that emulate those they will experience in their final exam.

You may wish to copy the files from the unit onto a secure shared network drive or VLE where students can access the presentations, worksheets, homeworks and links. Remember to remove any documents you would prefer them not to access such as the assessment and answer sheets.

You may also wish to upload the files for secure home access. This could be via an MLE such as Fronter, Frog, SharePoint or Moodle.

If you have any difficulty opening any of the files, which were all created in Office 365, or experience any other problems, please email support@pgonline.co.uk.

This is the ninth in a series of 10 units for Cambridge IGCSE 0478/0984 and O Level 2210 Computer Science. We hope you will find it useful.

We would greatly appreciate your feedback once you have had a chance to use the material. Please send an email to support@pgonline.co.uk.
